

## ANNOUNCING THREE EXCITING NEW PRODUCTS FROM PANEL SOURCE

### **PUREKÖR™** PureKor FSC Certified Birch Multi Ply

**Environmental Leadership: Once again, Panel Source leads the way in product development!** Panel Source announces its new PureKor FSC Certified Birch Multi Ply - the world's first FSC Certified Russian Birch plywood. This panel is a high quality birch plywood used extensively in millwork, furniture and cabinetry industries. The panel is manufactured with multiple veneers layers, with thicker panels being made with up to 17 plys. Opening inventories will be in the standard 5'x5' panel size, with 4x8 panels to be added later in the year.

### **PUREKÖR™** PureKor Platinum Grade MDF

**With PureKor Platinum Grade MDF, Panel Source is the first North American company to provide a product that captures the "Triple Crown" of Environmental Features in one panel!** PureKor Platinum Grade MDF is FSC Certified - Urea Formaldehyde Free and Moisture Resistant - the first time architects and designers can choose a panel offering all key environmental characteristics in one panel. PureKor Platinum MDF is also available as our Pyroblock Platinum Grade Fire Retardant MDF - a Class A Fire Rated Panel.

### **PUREKÖR™** PureKor FSC Certified Plywood Platforms

PureKor FSC Certified Plywood Platforms are specifically designed for hardwood plywood production. In addition to being both FSC Certified and Urea Formaldehyde Free, this product is manufactured with face veneers oriented to a 90 degree angle to the panel length, thus allowing the veneer operator to lay up hardwood veneers directly to the Plywood Platforms and eliminate the need for intermediate cross bands. Numerous thicknesses are offered, and this product is available now from Panel Source.
