

Purekor Platinum Concrete Formply

Description

Purekor Platinum Concrete Formply includes three separate panels for concrete forming:

- BBOES Concrete Formply
- MDO Concrete Formply
- HDO Concrete Formply

All material is FSC Certified and contains no added urea formaldehyde. Certified under Panel Source SCS-COC-00134

LEED Credits

- MR 5.1 + 5.2 (location dependent)
- MR 7.0
- EQ 4.4

Uses

For any jobs where the concrete formply needs to be both FSC Certified and urea formaldehyde free.

Features/Customer Benefits

Multiple LEED Credits:

Contributes to multiple LEED Credits simultaneously

FSC Certified:

Contains 100% FSC Certified Fiber
Multiple Grades:
BBOES, MDO, and HDO

Multiple Pours:

Depending on grade

Resists warping:

Provides superior dimensional stability

Thicknesses:

Available in both 5/8" and 3/4"

Service

McKillican can provide you with all your green forest product needs. Our product experts are available to answer any questions you may have regarding this product or any other, as well as LEED® requirements.

Thickness and Panel Options:

Panel Source offers FSC Certified Concrete Formply in both: 4x8-5/8" & 4x8-3/4 (Additional Sizes are available on special order).

All panels are offered as a 1 sided or 2 sided, depending on the customer's requirements.

Purekor Platinum BBOES Concrete Formply:

This product features a sanded fir plywood face, which is then coated with a release agent to permit easier stripping of the panel from the cured concrete. Additionally, all panels are sealed on four edges, to reduce moisture absorption through the edges of the panel. BBOES Concrete Formply is a low cost panel suitable for situations requiring a limited number of pours, and construction where the concrete finish appearance is not important.

Purekor Platinum MDO Concrete Formply:

MDO Concrete Formply uses a base of sanded fir plywood, which is then laminated with a medium density phenolic overlay film. Finally, the MDO face is coated with release agents, and all four edges are sealed. MDO Formply increases the number of pours in comparison to BBOES, and also produces a better appearance than BBOES.

Purekor Platinum HDO Concrete Formply:

When multiple pours and an outstanding finish are required then Purekor Platinum HDO Concrete Formply is the best choice. This panel features a high density overlay film that is so dense that, *it does not require the application of a release agent at the time of manufacture and it requires no reapplication of a release agent after use. The edges are also sealed.*
